PRP-KETO Pump Service Exchange **INTERCHANGEABLE WITH WARMAN® AH and M Series**

From This:

To This:

When a pump goes down and time is of the essence, we can provide you with a new or remanufactured unit in a short period of time – typically dispatched within 24 hours of receipt of order.

The core service exchange process is as follows:

1. Call our factory or distributor and have the pump and bearing assembly size ready to tell us.
2. We'll check our inventory and provide you an estimated dispatch date of a new/remanufactured unit.
3. Detailed pricing of our service exchange fleet will be provided by the PRP Authorised distributor in your area.
4. Your local distributor will provide freight instructions so you can ship the bare shaft pump you want exchanged for a remanufactured unit.
5. When you are ready to proceed, send an order with consignment note details of pump to be exchanged and the new/remanufactured unit will be dispatched.
6. The returned pump will then be fully overhauled and go into our pool of remanufactured units, awaiting the next emergency call.
7. All remanufactured pumps are brought back to 'as new' condition and accordingly we proudly offer the same warranty as supplied with new pumps. All have new bearings, new 'soft' seals, and new wet end wear parts.

PRP-KETO BEARING CARTRIDGE SERVICE EXCHANGE

BEARING CARTRIDGES INTERCHANGEABLE WITH WARMAN® ASSEMBLIES

From This:

To This:

When a pump goes down and time is of the essence, we can provide you with a new or remanufactured unit in a short period of time – typically dispatched the same day.

The core exchange process is as follows:

1. Call our factory or distributor and have the bearing assembly size ready to tell us.
2. We'll check our inventory and provide you an estimated arrival date of a new/remanufactured unit with detailed pricing.
3. An order for **70% of the 'new' bearing cartridge price** will be placed and the service exchange bearing housing will be dispatched ASAP. This is the **MAXIMUM** amount you will be charged for service exchange.
4. We'll provide freight instructions so you can ship the damaged unit back to our shop.
5. Upon receipt of the damaged unit, we'll perform a written repair cost analysis within 7 days of receipt of cartridge. If the overhaul requires only typical parts (refer following list), you will be credited so that your bill is reduces to roughly **40% of the 'new' bearing cartridge price.**
6. The returned cartridge will then go into our pool of remanufactured units, awaiting the next emergency call.

If a competitor bearing cartridge is returned with the '-10' labyrinth seals (old style with piston rings and lip seals) we will upgrade it to the modern PRP-Keto bearing seal design. Even then, you will not pay more than 70% of the new bearing cartridge price and the reliability of the service exchange fleet is assured.
